Berlin, July 24, 2019

Kithara at the All About Automation in Leipzig

Kithara Software will be exhibiting at this year's All About Automation in Leipzig from September 11 to 12. The focus areas of the trade show, system solutions, components, software as well as engineering for industrial automation and industrial communication, are also some of the main fields of application of the Kithara real-time system.

At booth C-108, Kithara will present the latest developments for software-based real-time solutions. Emphasis will be especially on functions of Kithara RealTime Suite for automation with EtherCAT, real-time image capturing and image processing as well as connection with automotive interfaces. At the Kithara booth, visitors are offered visual demonstrations of the real-time system as well as comprehensive information and personal consultation for individual solutions.

„A regional exhibition such as the All About Automation is a great opportunity for us to have extensive talks with regional experts. Due to the heavy specialization on automation, public interaction for us is usually of particularly high quality there. Visitors are quick to realize how the real-time solutions of Kithara RealTime Suite can be optimally applied to their projects to get the most benefits out of it", Uwe Jesgarz, managing director of Kithara Software GmbH, explained.

The exhibition for industrial automation in the trade fair city of Leipzig appeals especially to local participants. Here, manufacturers, distributors and service providers meet users and operators from Central Germany. Industry-specific experts are given the opportunity to discover custom solutions that are exclusively centered around the field of automation.

People interested in visiting can contact Kithara directly in order to receive free entry tickets.

About Kithara Software GmbH

Kithara Software is a specialist for real-time solutions, especially for the Windows® operating systems family. The real-time extension RealTime Suite is a comprehensive system library for hardware-dependent programming, communication, automation and machine vision. The software is an easy-to-use and powerful technical basis for advanced applications in production and manufacturing, automotive electronics as well as measurement and control engineering. It is the key element in machine building, testing rig development and other specialized applications. Kithara Software has representations in the USA as well as Asia and supports global companies with their innovative projects.
